☐ CLOUD MINING

Cloud mining is all about purchasing hash power, much like pool mining, where you can either purchase additional resources for your CPU or share your own. You pay for the desired hash rate and provide the remaining work to the miners. You receive a piece of whatever they made based on the hashes you purchased after a predetermined amount of time.

The Blockchain is updated as a result of the digital mining process for bitcoins. A lot of computational power is needed for this record-keeping operation.

The decentralized P2P (Peer-to-Peer) network that each Bitcoin miner contributes to keeps the payment network safe and reliable.

The Blockchain network is a decentralized P2P network with a shared ledger. The network is run by miners, who also record, process, and validate transactions because there is no central authority. The information exchanged over the network is readily available, yet private information is always kept private. To obtain their blocked rewards in this case, miners must validate blocks of transactions. Every time a new transaction block is added to the system, a new coin is introduced to the network.

■ ■ NON FARM PAYROLLS (NFP)

Non Farm Payrolls (NFP) counts the number of non-farm jobs created in the United States over the preceding month. The participation rate, average hourly earnings, and unemployment rate are all included in the report, which is typically released on the first Friday of each new month.

Put a buy order above the range's high and a sell order below the range's low. Put a safe stop-loss order on the other side of the range for each of the two orders. Wait for one of the instructions to be activated by NFP's initial response. Cancel the pending order after receiving the open position size.

No matter how much money they make annually, the majority of millionaires invest it where it will grow, typically in stocks, bonds, and other safe investments. Millionaires invest their money in mutual funds and other growth-oriented investments.
